

WHAT IS SO DIFFERENT?

- ✅ Training from IT company with 6 months exp letters
- ✅ AI ATS resume builder
- ✅ Unlimited AI Mock interviews with feedback
- ✅ Unlimited job offers until you're placed
- ✅ Guaranteed 1st round interviews
- ✅ Medical plan + doctor calls — up to ₹1 lakh coverage!

FULL STACK JAVA
SYLLABUS

Developer Basics

- ·What is client-server architecture?
- ·Understand IP addresses using ipconfig (Windows) or ifconfig (Mac/Linux).
  Test accessing your web server via your local IP.
  What are ports in ip addresses?
- ·Learn the basics of HTTP and HTTPS using browser developer tools to inspect requests/responses.
- ·Explore DNS:
  Understand how domain names resolve to IP addresses.

Understanding the Terminal

- Learn essential terminal commands (ls, cd, mkdir) and navigate the file system efficiently.
- Common Project Folder Structure Understand typical project folder layouts, including directories like src, config,
- assets, build, and their purposes in development.

Git & GitHub

- ·Install Git and set up your username and email.
- ·Create Git,Git Repository,Staging,Commit
- ·Create a GitHub account and link your local repository to a remote one.
- ·Push your changes to GitHub and learn what is pull, clone, and push.

- ·Create and merge branches:
  Create a new branch, make changes, and merge it into the main branch.
- ·Resolve merge conflicts and learn about version control workflows.
- · Working with GitHub features like Issues, Pull Requests.

HTML & CSS

- ·Learn the structure of an HTML document (doctype, meta, title,head, body,h1,)
- ·Use basic tags: <h1>, <p>, <a>, <img>, <ul>, and forms.
- ·Style your web page using inline, internal, and external CSS.

- ·Learn CSS selectors: tag, class, and id.
- ·Use CSS properties like color, padding, margin, and font-size.
- ·Create layouts using Flexbox and Grid.
- ·Add interactivity with pseudo-classes like :hover and :active.
- ·Implement responsive design with media queries.
- ·Learn inspect element how to check css attributes

Java Topics List

- ·Learn JavaScript syntax: variables (var, let, const), data types, and operators.
- ·Write programs with loops (for, while), conditionals (if, else, switch), and arrays.

- ·Learn functions (regular and arrow) and their use in modular code.

Manipulate the DOM:

- ·Select elements with getElementById and querySelector.
- ·Change element content, style, and attributes dynamically.
- ·Add event listeners (click, input, etc.) to handle user actions.
- ·Explore ES6+ features like template literals, destructuring, and promises.
- ·Understanding Local Storage, Cookies and Sessions.
- ·JSON Basic

Debugging Web Applications

- ·Debugging Web Applications Using Browser Tools
- Use Chrome DevTools to debug JavaScript errors, inspect HTTP requests, and analyze page performance.
- Effective Error Troubleshooting
  Learn to use Google search effectively, identify error sources, and find solutions on platforms like StackOverflow and GitHub.

REST APIs and Postman

- ·Understand what REST APIs are and their architecture.
- ·Learn about HTTP methods: GET, POST, PUT, DELETE.

JWT & API Authentication

- ·Understand what JWT (JSON Web Tokens) is and its use in authentication.
- ·Learn the structure of a JWT (header, payload, signature).
- ·Implement user authentication using a public API.
- ·Test token-based authentication using Postman.

React.js

- ·Install Node.js and set up a React project with vite-js.
- ·Understand JSX syntax and how React components work.
- ·Create functional components and pass data using props.
- ·Manage state with useState and handle side effects with useEffect.

Database Basics

- ·Learn the role of databases in web applications.
- ·Install MySQL/PostgreSQL and set up a sample database.
- ·Write basic SQL queries (SELECT, INSERT, UPDATE, DELETE).
- ·Use filtering, sorting, and grouping in SQL queries.
- ·Design a simple schema with relationships (one-to-many, many-to-many).
- ·Learn about indexes and how they optimize queries.
- ·Practice joins (INNER JOIN, LEFT JOIN, etc.) with relational data.

Java Basics

- ·Install Java JDK and set up your development environment.
- ·Write your first Java program ("Hello World").
- ·Understand Java syntax, variables, and data types.
- ·Practice conditionals (if, else, switch) and loops (for, while).
- ·Create a Java class, write a constructor, and instantiate an object.
- ·Implement method overloading in a class.
- ·Demonstrate Abstraction by:
  Implementing an abstract class with abstract and non-abstract methods.
  Creating and using an interface.

- ·Demonstrate Inheritance by:

Creating a parent and child class using extends.

Using super to access parent class methods and variables.

- ·Demonstrate Polymorphism by:

Overriding a method in the child class (runtime polymorphism).

Implementing method overloading (compile-time polymorphism).

- Using dynamic method dispatch.
- ·Demonstrate Encapsulation by:

Creating private fields with getter and setter methods.

Using access modifiers (public, private, protected).

- ·Use static methods and variables in a program.

- ·Handle errors using:
  try-catch blocks.
  finally for cleanup operations.
  Creating and throwing a custom exception.
- ·Use Java Collections:
  Practice with ArrayList to add/remove elements.
  Use a HashMap to store and retrieve key-value pairs.
  Use a HashSet for unique values.
- ·Demonstrate file handling by creating and reading text files.
- Use Java Streams and Lambdas:
- Filter a list of integers using a stream and lambda expression.
  Use a map to transform data.
  Use reduce to aggregate data.
  Practice sorting and filtering collections with streams.

- ·Build a mini-project using OOP concepts, collections, and streams, like:
  A library system.
  A basic student grading system.
  A simple task management application.

Spring Boot Basics

- ·Set up a Spring Boot project using Spring Initializer.
- ·Understand the folder structure and its components.
- ·Write a basic REST API using @RestController.
- ·Add database integration with Spring Data JPA.
- ·Perform CRUD operations using a database.
- ·Learn about dependency injection and how it works in Spring.

Spring Security & JWT

- ·Set up Spring Security in your Spring Boot application.
- ·Implement role-based access control.
- ·Integrate JWT authentication for secure API access.
- ·Create endpoints for user login and signup with authentication.

Deployment

- ·Learn the basics of Docker and build a container for your backend.
- ·Deploy your containerized application on platforms like Render.
- ·Deploy a React frontend to a hosting service (e.g., Vercel, Netlify).
- Set up a CI/CD pipeline using GitHub Actions for automated deployments

ON THE JOB LEARNING:

Get On The Job Training through live projects of IT Companies that build confidence & reinforce learning with real-world applications of the tech stack
