WHAT IS SO DIFFERENT?

- ✅ Training from IT company with 6 months exp letters
- ✅ AI ATS resume builder
- ✅ Unlimited AI Mock interviews with feedback
- ✅ Unlimited job offers until you're placed
- ✅ Guaranteed 1st round interviews
- ✅ Medical plan + doctor calls — up to ₹1 lakh coverage!

FULL STACK PYTHON
SYLLABUS

Developer Basics

- ·Understanding client-server architecture..
- ·Understand IP addresses using ipconfig (Windows) or ifconfig (Mac/Linux).
- Test accessing your web server via your local IP.
- What are ports in ip addresses?
- ·Learn the basics of HTTP and HTTPS using browser developer tools to inspect
- ·requests/responses.
- ·Explore DNS:
- Understand how domain names resolve to IP addresses.

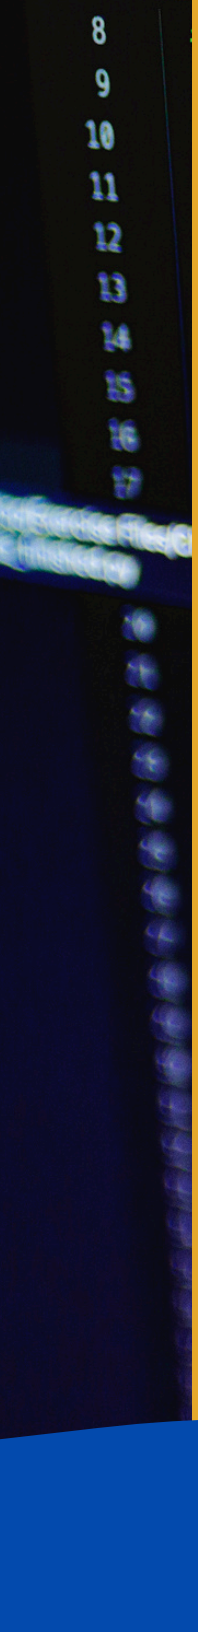
- ·Understanding the Terminal
- Learn essential terminal commands (ls, cd, mkdir) and navigate the file system
- ·efficiently.
- ·Common Project Folder Structure
- Understand typical project folder layouts, including directories like src, config,
- ·assets, build, and their purposes in development.
- ·Debugging Web Applications Using Browser Tools
- Use Chrome DevTools to debug JavaScript errors, inspect HTTP requests, and analyze
- ·page performance.
- ·Effective Error Troubleshooting
- Learn to use Google search effectively, identify error sources, and find solutions on
- ·platforms like StackOverflow and GitHub.

Git & GitHub

- ·Install Git and set up your username and email.
- ·Initialize a local Git repository, make changes, and commit them with meaningful messages.
- ·Create a GitHub account and link your local repository to a remote one.
- ·Push your changes to GitHub and learn the basics of pull, clone, and push.
- ·Create and merge branches:
  Create a new branch, make changes, and merge it into the main branch.
- ·Resolve merge conflicts and learn about version control workflows.
- ·Explore GitHub features like Issues, Pull Requests, and Actions.

HTML & CSS

- ·Learn the structure of an HTML document (doctype, head, body).
- ·Use basic tags: <h1>, <p>, <a>, <img>, <ul>, and forms.
- ·Style your web page using inline, internal, and external CSS.
- ·Learn CSS selectors: tag, class, and id.
- ·Use CSS properties like color, padding, margin, and font-size.
- ·Create layouts using Flexbox and Grid.
- ·Add interactivity with pseudo-classes like :hover and :active.
- ·Implement responsive design with media queries.
- ·Learn inspect element how to check css attributes



JavaScript

- ·Understand how to include JavaScript in an HTML file.
- ·Learn JavaScript syntax: variables (var, let, const), data types, and operators.
- ·Write programs with loops (for, while), conditionals (if, else, switch), and arrays.
- ·Learn functions (regular and arrow) and their use in modular code.
- ·Manipulate the DOM:
  Select elements with getElementById and querySelector.
  Change element content, style, and attributes dynamically.
- · Add event listeners (click, input, etc.) to handle user actions.
- · Explore ES6+ features like template literals, destructuring, and promises.
- · Understanding Local Storage, Cookies and Sessions.

Debugging Web Applications

- ·Debugging Web Applications Using Browser Tools
- ·Use Chrome DevTools to debug JavaScript errors, inspect HTTP requests, and analyze
- ·page performance.

Effective Error Troubleshooting

Learn to use Google search effectively, identify error sources, and find solutions on platforms like StackOverflow and GitHub.

REST APIs and Postman

- ·Understand what REST APIs are and their architecture.
- ·Learn about HTTP methods: GET, POST, PUT, DELETE.
- ·Install and explore Postman:
  - Test a GET request to a public API.
  - Perform a POST request with a JSON payload.
- ·Learn about HTTP headers, status codes, and query parameters.
- ·Test error scenarios like invalid requests using Postman.

JWT & API Authentication

- ·Understand what JWT (JSON Web Tokens) is and its use in authentication.
- ·Learn the structure of a JWT (header, payload, signature).
- ·Implement user authentication using a public API.
- ·Test token-based authentication using Postman.

React.js

- ·Install Node.js and set up a React project with vite-js.
- ·Understand JSX syntax and how React components work.
- ·Create functional components and pass data using props.
- ·Manage state with useState and handle side effects with useEffect.
- ·Add interactivity by handling events in React components.
- ·Implement navigation using react-router-dom.
- ·Public API Integration:
  Fetch data from a public REST API (e.g., weather, jokes API) using fetch or axios.
  Display the fetched data dynamically in your React components.
- ·Build a small project, such as a to-do app or weather app, to consolidate your learning.

Database Basics

- ·Learn the role of databases in web applications.
- ·Install MySQL and set up a sample database.
- ·Write basic SQL queries (SELECT, INSERT, UPDATE, DELETE).
- ·Use filtering, sorting, and grouping in SQL queries.
- ·Design a simple schema with relationships (one-to-many, many-to-many).
- ·Learn about indexes and how they optimize queries.
- ·Practice joins (INNER JOIN, LEFT JOIN, etc.) with relational data.

Python Basics

- ·Install Python, set up your environment, and write your first program (“Hello, World”).
- ·Learn Python syntax, variables, and data types like integers, strings, and booleans.
- ·Practice conditionals (if, else) and loops (for, while) with control statements like break
- and continue.
- ·Work with functions using def, lambda expressions, and return values.
- ·Explore collections: lists, tuples, sets, and dictionaries for managing data.
- ·Handle errors with try-except and create custom exceptions.
- ·Perform file handling to read and write text files using context managers.

- ·Understand OOP concepts:
  Create classes, objects, and constructors.
- Implement encapsulation with private fields and getter/setter methods.
- Use inheritance and polymorphism to extend and override functionality.
- ·Practice with essential libraries like random, datetime, and collections.
- ·Build a simple project such as a calculator, task manager, or file organizer.

Django and Django REST Framework (DRF)

- ·Set up a Django project.
- ·Create basic views and templates.
- ·Implement forms and handle user input.
- ·Add database integration with Django ORM.
- ·Implement user authentication.
- ·Learn about middleware and request handling.
- ·Set up Django REST Framework (DRF).
- ·Create RESTful APIs with DRF.
- ·Implement authentication in DRF.
- ·Test your APIs.

Frontend Integration

- ·Integrate Rest APIs with frontend frameworks.
- ·Handle CORS and authentication.

Deployment

- ·Learn the basics of Docker and build a container for your backend.
- ·Deploy your containerized application on platforms like Render.
- ·Deploy a React frontend to a hosting service (e.g., Vercel, Netlify).
- ·Set up a CI/CD pipeline using GitHub Actions for automated deployments.
